-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Specification***

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
2. The abstract of the disclosure does not commence on a separate sheet in accordance with 37 CFR 1.52(b)(4). A new abstract of the disclosure is required and must be presented on a separate sheet, apart from any other text.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:  

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the position *control* apparatus" (emphasis added) at page 22, line 12 of the specification. There is insufficient antecedent basis for this limitation in the claim. It is unclear whether this limitation refers to Applicant's "position *information* apparatus" (emphasis added) in claim 1, at page 22, line 4, or if it is a different component.

***Allowable Subject Matter***

5. Claims 1-6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: No prior art has been found to disclose or suggest Applicant's image processing system, which includes an image processing apparatus having a communication interface connected in series with a transmission line and a storage means that stores a position detection signal for capturing an image of a subject and generates an image processing signal based on image processing, and a master apparatus for implementing communication control of the image processing apparatus and position control apparatus, *wherein the image processing apparatus starts image processing, in accordance with an in-bound start command, stores in the storage means the position detection signal, and outputs to the master apparatus the position detection signal along with the image processing signal*, as recited in claim 1.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent 4,485,447 (Ericsson) disclosed a method and arrangement for registration of print on a material, wherein a reference pattern is registered on a table, where it is scanned and its position recorded, and a material is then printed, following which it is transferred to a registering table where its position is scanned and recorded.

U.S. Patent 6,449,516 (Kyomasu et al.) discloses a bonding method and apparatus, with a position-detecting camera for measuring a positional relationship between reference marks and the optical axis of the position-detecting camera.

U.S. Patent 6,845,296 (Ban et al.) discloses an object taking out apparatus capable of taking out randomly stacked objects, wherein an image of randomly stacked workpieces is captured and analyzed to determine positions/orientations of images of the respective workpieces using whole feature information.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas D. Lee whose telephone number is (571) 272-7436. The examiner can normally be reached on Monday-Friday, 7:30-5:00, alternate Fridays off.
